MASERGY Introduces Secure, Network-Embedded Remote Access

Managed service allows enterprise customers to increase productivity with an affordable, high-performance SSL VPN solution

DALLAS (July 29, 2008) — MASERGY, a global service provider specializing in simplifying business networks for enterprises, has introduced its Managed Remote Access in the Cloud service for enterprise customers to experience the benefits of SSL VPN Remote Access without considerable capital and operating expense and without reconfiguration of the corporate network and applications.

MASERGY's Remote Access in the Cloud solution simplifies remote access for customers, telecommuters and partners by offering access to corporate files, applications and resources through an easy-to-use portal from a standard Web browser. MASERGY's offer enables enterprises to reap the benefits of SSL VPN without the headache of owning, maintaining and monitoring the typical hardware, software and licenses.

"MASERGY is committed to offering advanced network-embedded solutions. To supplement our successful Service Control Center and Network Analyst products, we now offer this customizable Remote Access solution to enterprises requiring secure, mobile access to the network," said Scott Brothers, director of product management at MASERGY. "With the Managed Remote Access in the Cloud service, enterprise employees working remotely are also protected by the security and reliable performance of the MASERGY network."

Benefits for enterprises implementing MASERGY's Managed Remote Access service include:

- Protection of corporate network from security risks
- Advanced security with end-to-end encryption and data integrity
- Increased productivity with network access through a standard Web browser
- Rapid implementation and infinite scalability
- Expert support, proactive monitoring and management
- Affordable with no capital or hardware expense and low monthly payments
- Value-added options based on corporate needs
- Optimized for real-time applications like voice and video

Since the Remote Access solution is embedded in the MASERGY MPLS network, the connection is 100-percent secure and offers remote users a virtual office from any location. Users can make VoIP phone calls and participate in video conferences; and company intranet, extranets and network file folders are as accessible as if the user was sitting at his desk.

ABOUT MASERGY:

MASERGY is a privately held global network service provider specializing in delivering the strongest customer experience in the telecommunications industry. Serving hundreds of customers throughout the Americas, Europe, Asia, Africa and Australia, MASERGY leverages advanced transport technologies to deliver global Ethernet services across a native MPLS network. The company pioneered customer-controlled network services and the delivery of multiple services over a single network connection. MASERGY's customers include companies from the financial/banking, healthcare, entertainment broadcasting, hospitality/hotels and manufacturing industries. MASERGY received the 2008 Nemertes Research Pilot House Awards for Best Overall MPLS Service and Best Overall Customer Experience for Emerging Providers. More information is available online at <http://www.masergy.com> or by calling +1 866-MASERGY.
